

GLOBAL WAREHOUSE

Kamp-Lintfort,
Germany

ABOUT

The Global Warehouse and Logistics Group is a specialist in furniture and home supply logistics. For many years, the company has been a reliable partner for furniture shops, furniture discount markets and for suppliers

of these industries. Global Warehouse has multiple types of warehouses across Germany, Switzerland and Poland, ranging from 30,000m² to 82,000m² in storage space.

PROBLEM

Global Warehouse realized very early on that they had to physically protect their huge investments in this brand-new warehouse. Forklift traffic can cause damage many in different areas in very little time. This makes impact protection

a must-have. Incidents, such as rack collapses, damage to supporting beams and columns, damaged loading dock gates due to minimal lighting, etc. all pose an actual risk and can affect everyone working there in the future.

34.900

Forklifts account for around 85 deaths and 34.900 serious injuries annually.

Occupational Health and Safety Administration (OSHA)

PROTECTION OF LOADING DOCKS AND GATES

Multiple **BO LED** protective posts were installed across every single loading dock. The previously badly illuminated trailers can now be clearly seen. They protect crucial and vulnerable areas on both sides of the gates at the same time.

COST-SAVING SOLUTION

The cost of repairing industrial gates and racks after a vehicle impact can be high and will easily exceed the cost of purchasing safety barriers. Repairs require a lot of time and resources. In most cases, the normal traffic and work flows will need to be altered while performing urgent repairs in the damaged areas. This can badly affect the time of delivery to your customers.
